Your Tasks

- Maintenance
 - Corrective maintenance: addressing bugs reported during operations, testing or commissioning activities
 - Adaptive maintenance: adapt software to changes in the environment: e.g. operating system, third-party software and hardware upgrades
 - Perfective maintenance: Modification of the software to improve performance, stability or maintainability
 - Preventive maintenance: addressing particular areas of weakness with high maintenance or failure rates
- Feature requests
 - Improvements: Improving and modifying existing functionality of existing software components
 - New features: Adding additional functionality to one or more software components or developing completely new software components

Your Qualification

- University degree in Computer Science, Astronomy, Physics, Engineering, or equivalent
- Solid professional experience developing software in Java
- Professional experience with SQL and interfacing Java to relational databases using JDBC, Hibernate, Spring Data
- Solid practical familiarity with modern software engineering practices and tools, including configuration control tools, incremental & iterative development, unit and integration testing and the Linux environment
- Solid practical familiarity with build and source code control tools: e.g. Makefile, Ant, Maven, Gradle, Git
- Demonstrated capability of conducting small to medium size software projects through the entire software lifecycle up to successful deployment
- Very good oral and written communication skills in the English language (minimum level B2)

Desirable skills:

- Professional experience in web front-end development, some of this experience preferably in Angular (2 or later)
- Professional experience in other high-level, object-oriented programming languages, in particular C++ or Python
- Practical exposure to non-relational data stores such as Elastic Stack or Cassandra
- Experience in Java-based desktop GUI programming
- Practical experience in using virtualisation, in particular Docker
- Background in astronomy or astrophysics, especially radio interferometry
- Previous experience working in an international environment

What we offer

- At etamax space you can expect interesting projects in a technologically attractive environment.
- You work in a dedicated team, where the doors are literally always open for questions and exchange of ideas.
- Flexible working hours, independent working in our flat hierarchy and possibilities to develop your career are only a few advantages of an employment at etamax.
- Exciting projects, an open and cooperative atmosphere as well as many nice colleagues are looking forward to you!
